

Lab Sheet 4

Create an authentication form.

Requirements:

1. Create a database (exp. Myfirstdatabase, ibp etc.)
2. Create tables in the target database (tbl_user, users, visitor, fraud, etc.)
3. Create a PHP file (login.php, entrance.php etc.)
 - a. With a form
 - i. An if-else statement to obtain authorization
 - I) If an authenticated user, state what to do
 - II) If it's a fraud, state what to do
 - III) If it's a first attempt to authenticate, state what to do with PHP instructions
 - b. Verification should include the SHA function (SHA256) instead of storing the passwords raw (as it's)
4. Use an include or require function to establish a database connection (config.php)
